PROJECTS

Project : **Amazon Clone**
URL : https://amazon-clone-97.netlify.app/
Github : **https://github.com/onlynavv/amazon-clone/tree/main/amazon-clone-app**
Platform : **ReactJS**

Description:
This project is a clone of Amazon, where you can add the items in the basket and remove items from the basket. The products are fetched from API. After adding the products to the cart you can proceed to checkout. Individual category products are displayed using react router

Project : **Slack Clone**
URL : https://chat-app-45971.web.app/
Github : https://github.com/onlynavv/slack-clone/tree/main/slack-clone-app
Platform : **ReactJS**

Description:
This project is a clone of Slack, where you can send messages from any channels, and you can also add new channel and then start having conversation. Navigate through the channels. The messages will be stored and retrieved when you login again. You can login through Google Authentication. Firebase is used as the backend

Project : **Linkedin Clone**
URL : https://linkedin-clone-ef0a7.web.app/
Github : **https://github.com/onlynavv/linkedin-clone/tree/main/linkedin-clone-app**
Platform : **ReactJS**

Description:
This project is a clone of linkedin, where you can post content and can also upload images and add video links which will played in the feed which is powered by react-player Posts will be stored and then retrieved when the user login again. Firebase is used to store the posts by any user. Post can entered same like in linkedin popup modal

Project	: Netflix Clone
URL	: https://netflix-clone-903a0.web.app/
Github	: https://github.com/onlynavv/netflix-clone-react/tree/main/netflix-clone
Platform	: ReactJS

Description:

This project is clone of Netflix, where all the movies and tv series data are fetched from API, to fetch the API here we have used axios. Displayed based on the categories and also you can look for the movie info when clicked and scrolling effect is added to explore more. User can create an account and login to use the clone app

Project	: Shopping Cart (Redux)
URL	: https://shopping-cart-9797.netlify.app/
Github	: https://github.com/onlynavv/shopping-cart/tree/main/cart-app
Platform	: ReactJS

Description:

This is a shopping cart project where you can add the products into the cart and also remove the products from the cart, total will be displayed in the cart page, you can navigate through the app with the help of react router. Here the state management is done by Redux, whether to add the product and remove the cart all are done by the state management tool. If the same item is added twice the quantity will be increased in the cart instead of adding that item twice in the cart

Project	: Movie Search
URL	: https://movie-search-9797.netlify.app/
Github	: https://github.com/onlynavv/moviedb/tree/main/moviedb
Platform	: ReactJS
